

Test Test Test!!

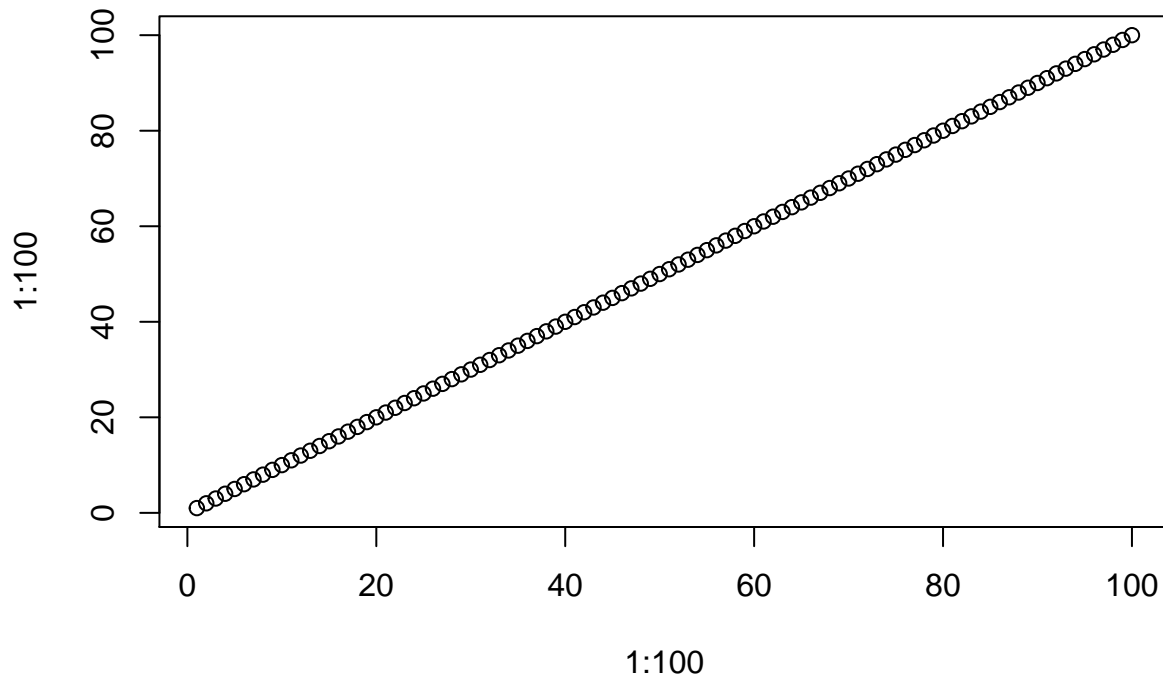

Hello!

This is the Rmarkdown document!

But surprise: It is linked to overleaf via Github!

And this is a line:

```
plot(1:100, 1:100)
```

You can knit this document, which will create a .tex file. Before you push it to Github, you have to run

```
./trimtex.sh filename.tex
```

in the shell!

Then you can push the document!
